

# Terrestrial vs Mobile Scan

By: Wade Seymore

# Control

- Vertical and Horizontal established
- Same control for apples-to-apples comparison
- Panels every 400 Foot

# Process (Field)

## Mobile

- Setup
- Scan
- Post Op

## Terrestrial

- Setup
- Scan

# Process (Office)

- Download data
- Tie the scan to control
- Eliminate noise
- Extract what data you want.

# Challenges

- Done in phases
- Lower speed for mobile
- Obstacles, vehicles, Joints still open

Photos

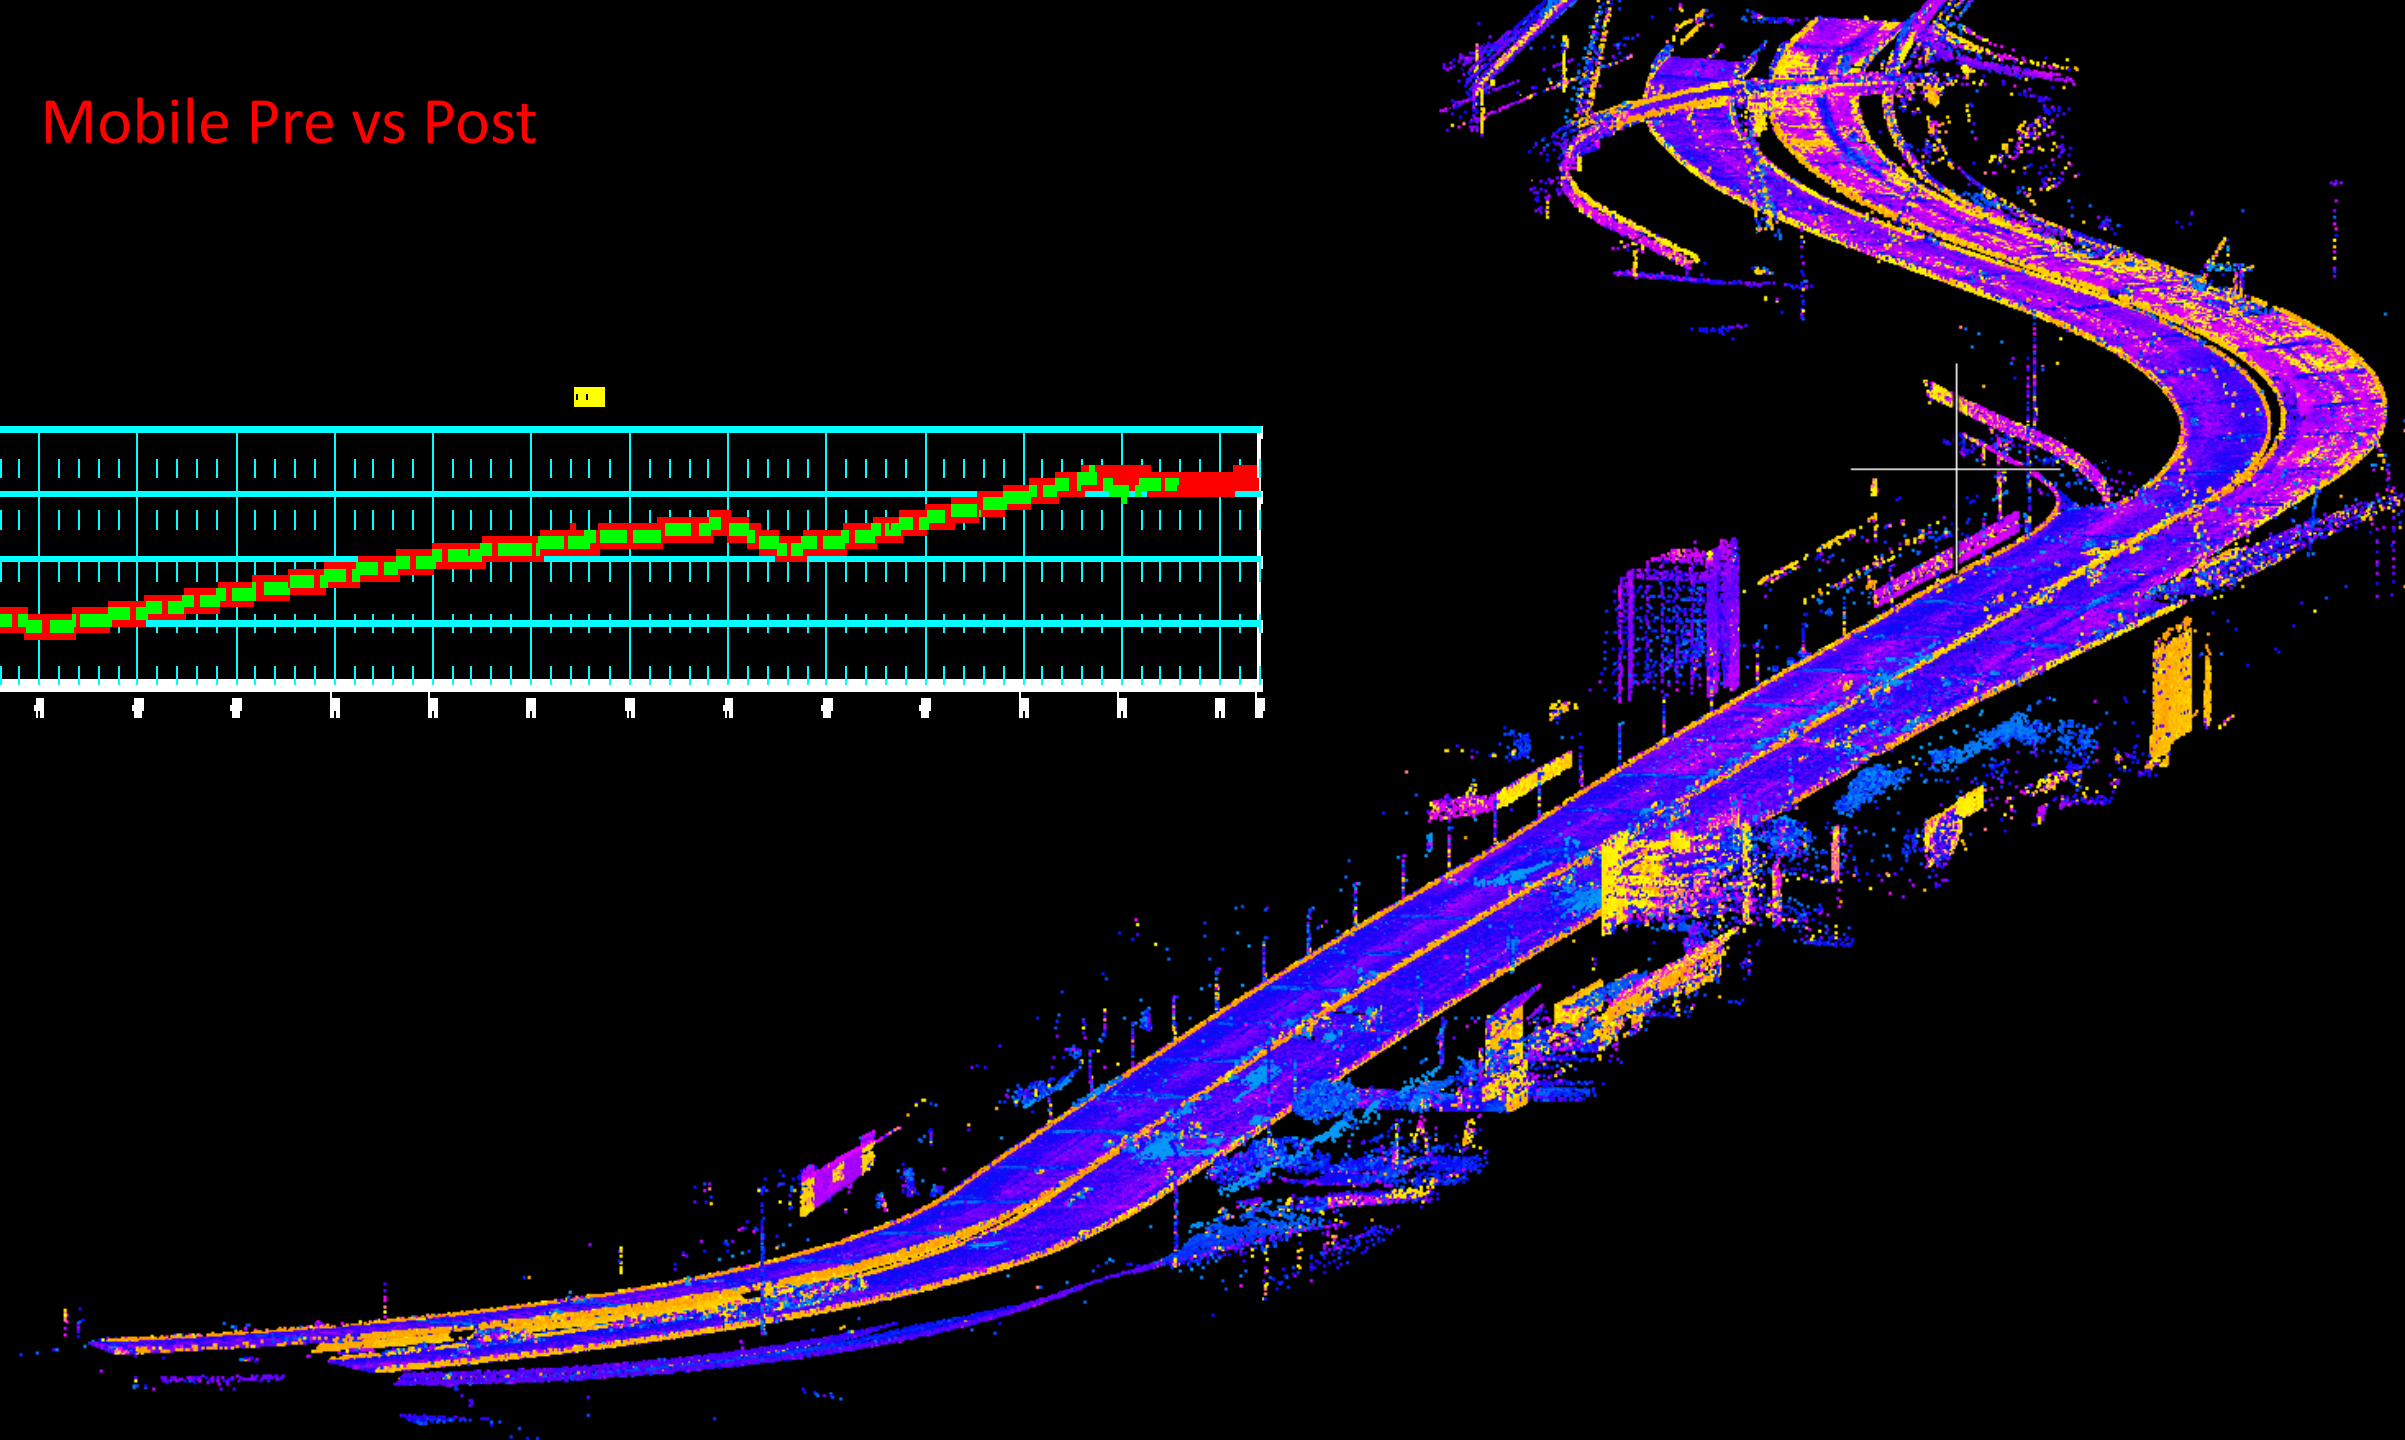

# Comparison

- Mobile Pre vs Post
- Terrestrial Pre vs Post
- Pre Mobile vs Terrestrial
- Post Mobile vs Terrestrial
- Cross Sections (Traditional, Mobile, Terrestrial)

## Mobile Pre vs Post

## Mobile Pre vs Post

## Mobile Pre vs Post

- Data had a consistent depth for majority of the project
- 1 bad spot in the pre scan

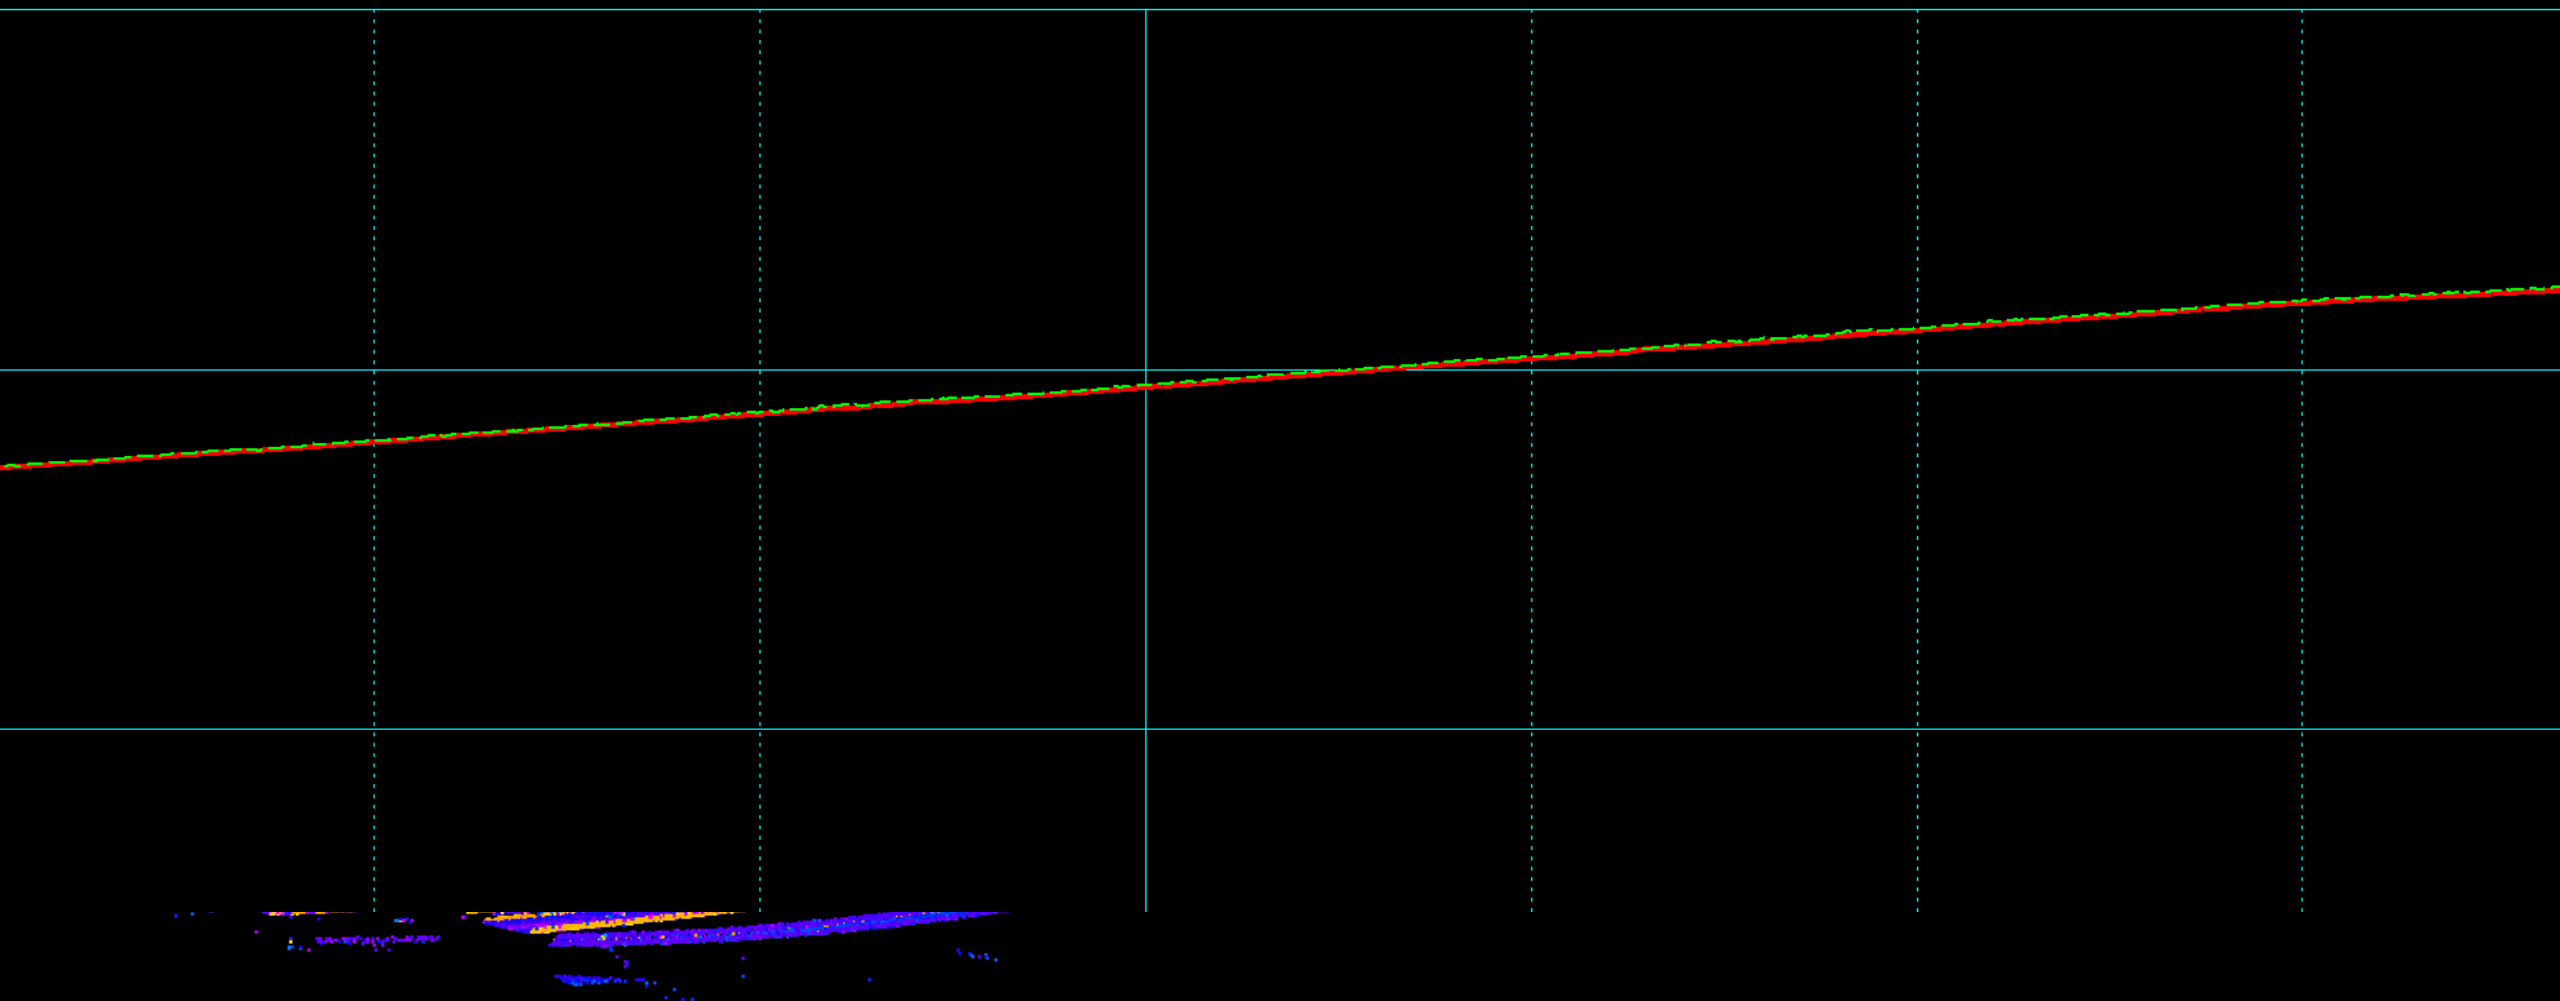

## Terrestrial Pre vs Post

## Terrestrial Pre vs Post

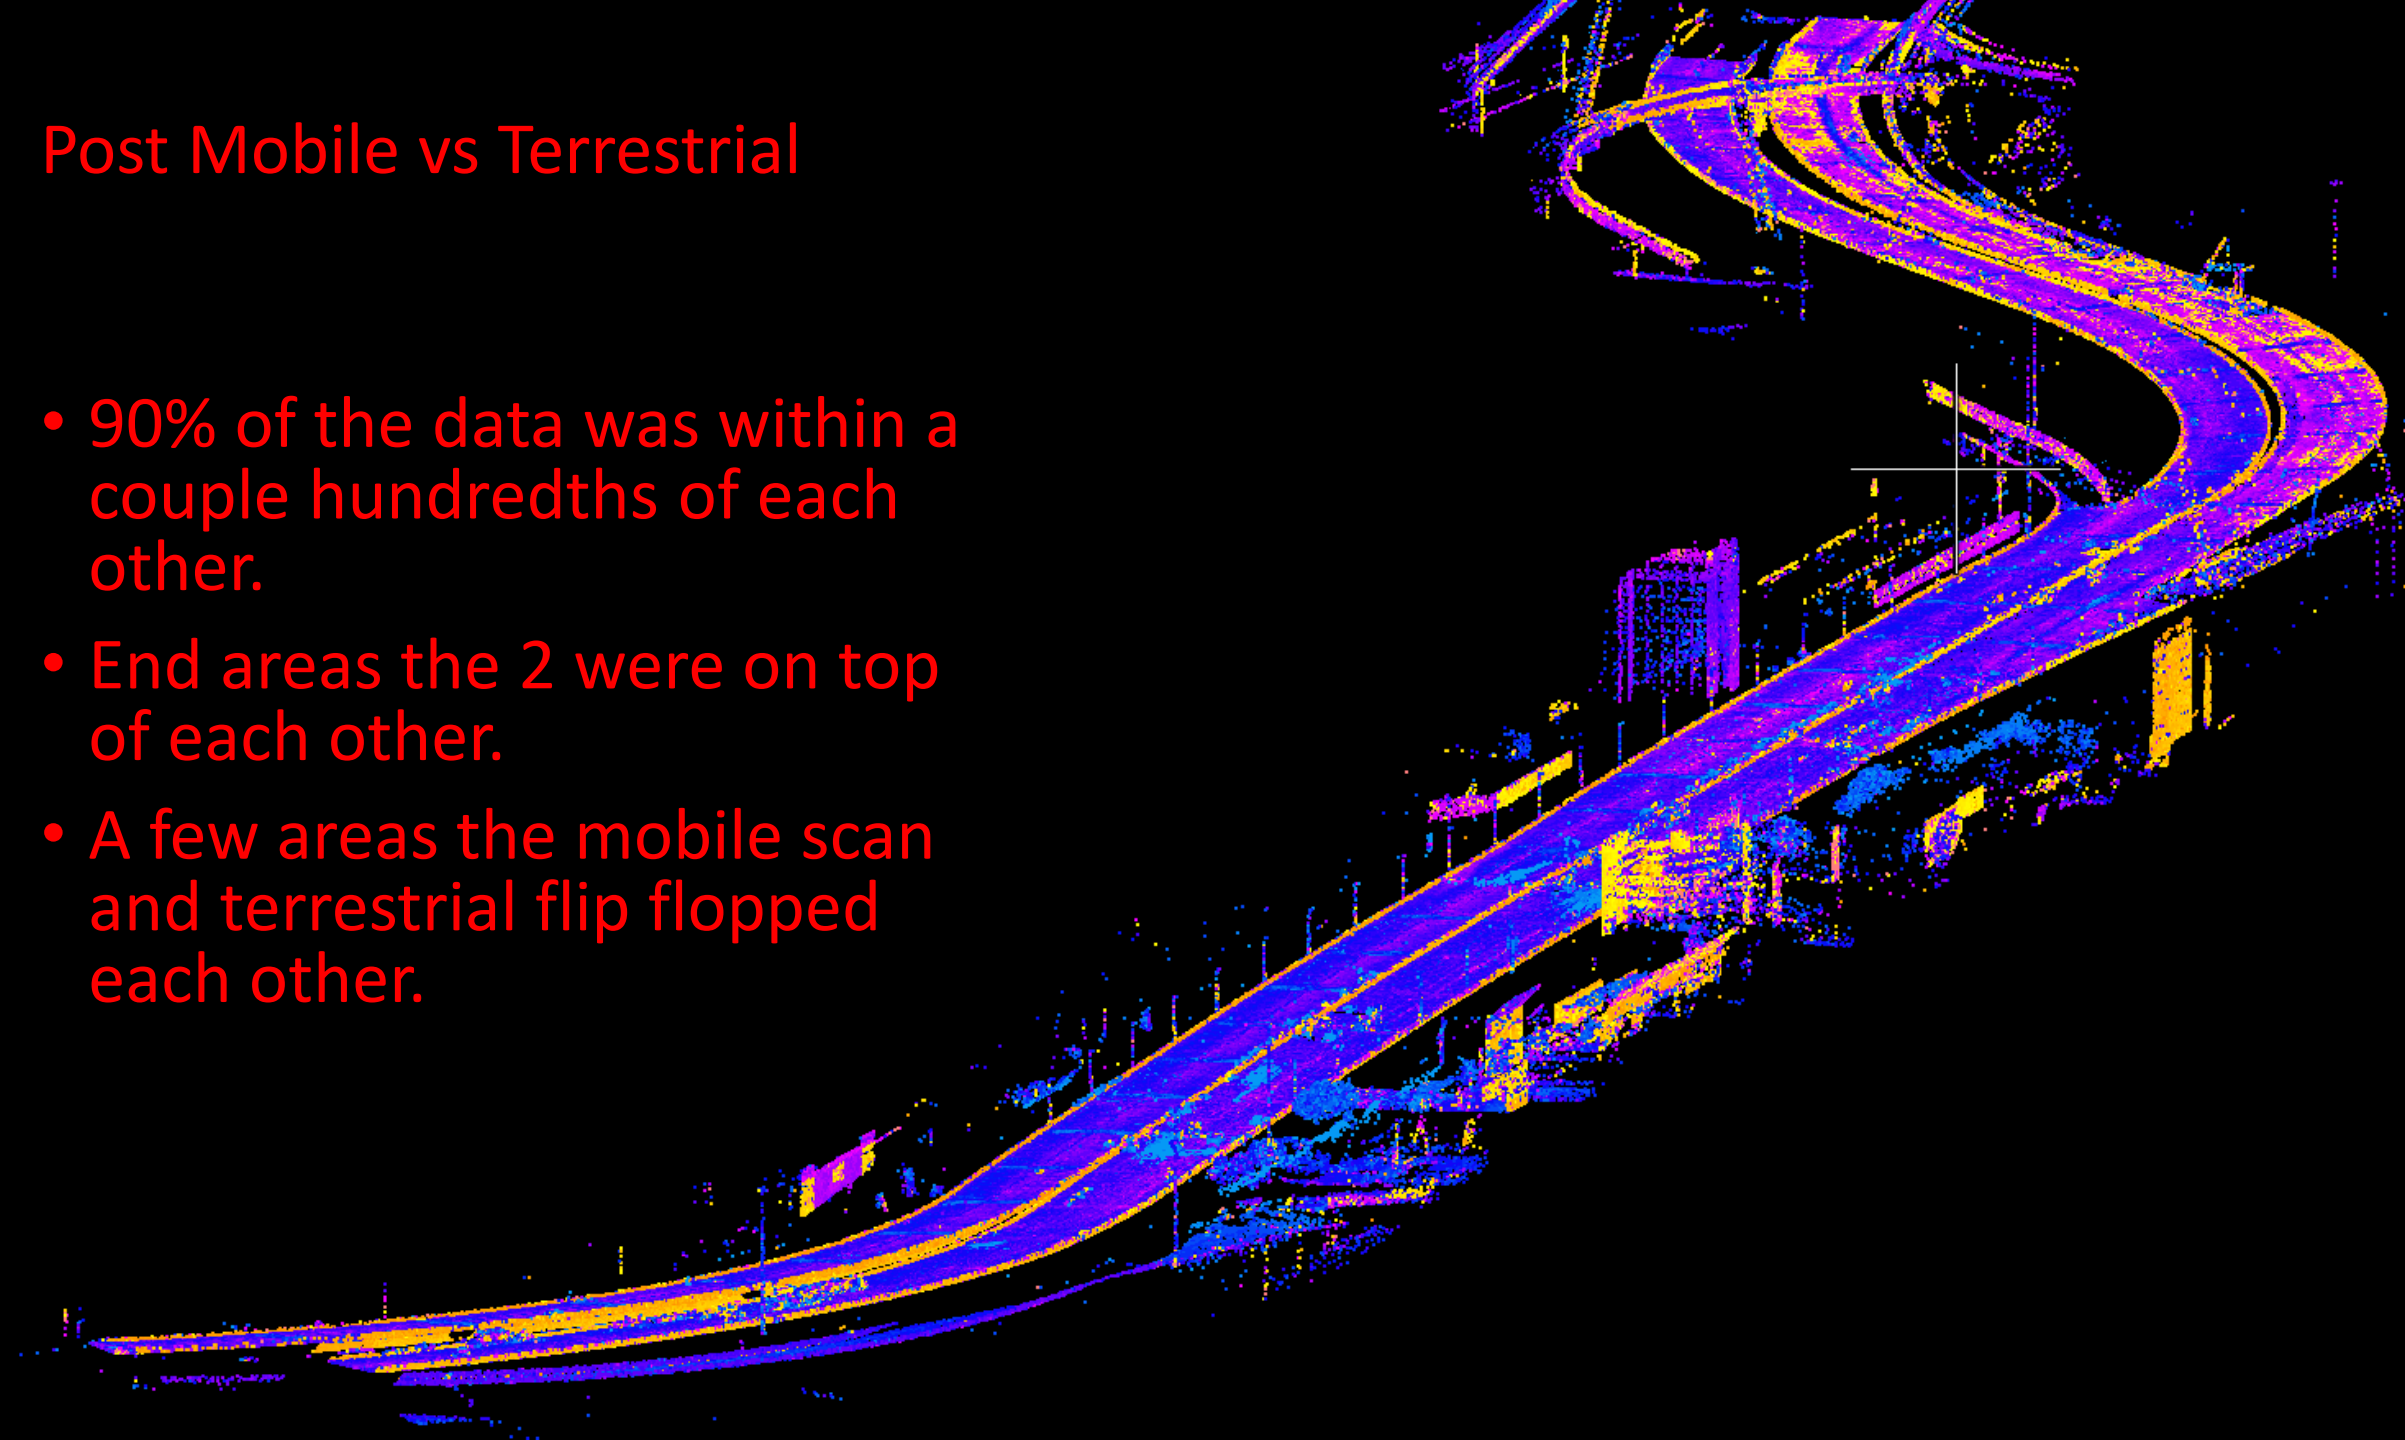

- Data had a consistent depth throughout the project
- Few outliers

## Post Mobile vs Terrestrial

- 90% of the data was within a couple hundredths of each other.
- End areas the 2 were on top of each other.
- A few areas the mobile scan and terrestrial flip flopped each other.

# Going Forward

- What did we get out of it?
- Can we trust it?
- Questions?
